Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

FloodPrediction/

```

|
|— app.py
|— model.pkl
|— scaler.pkl
|— requirements.txt
|— README.md
|— dataset/
|   |— flood_dataset.xlsx
|— notebooks/
|   |— Flood_Prediction.ipynb
|— templates/
|   |— home.html
|   |— index.html
|   |— result.html
|— static/
|   |— css/
|   |— images/
|— models/
|   |— decision_tree.py
|   |— random_forest.py
|   |— knn.py
|   |— xgboost.py
|— screenshots/
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted
Login Credentials (Demo)	Not Required

Platform / Hosting Provider	Local Flask Application
Repository Link	https://github.com/Harshitha3251/Rising_Waters
Demo Video Link	https://drive.google.com/file/d/1qo6W549ATqPPTjM0a9AgWIRoNTPj_XyT/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Python 3.10+
- pip
- Flask
- NumPy
- Pandas
- Scikit-learn
- XGBoost
- Joblib

Steps

1. Clone the repository.
2. Open terminal in the project folder.
3. Install dependencies:

```
pip install -r requirements.txt
```

Run the application:

```
python app.py
```

Open browser:

```
http://127.0.0.1:5000
```

Enter weather parameters and click **Predict** to view flood prediction.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Accuracy depends on quality of input weather data	Use validated datasets
2	Model trained on historical data only	Periodically retrain with latest data
3	Application currently supports local deployment	Can be deployed to IBM Cloud in future
